Address: 100 S. Capital Ave.
Indianapolis, IN
Capacity: 60,129
Uses: Football, Baseball,
Concerts, Conventions,
Evangelical and Special
Events

**TRIATEK
Product:** LP-2800

Reference: Tom Kelly,
Johnson Controls

Since its inception, the versatile RCA Dome has been the setting for various high profile events including the NCAA Final Four, the NCAA Track & Field Finals, the World Gymnastic Finals, the Indiana State High School basketball and football championships, the NFL playoffs, various concerts, Billy Graham and associated other special events that demanded a reliable, integrated, and cost effective lighting control system. The previous lighting control system was unsatisfactory to the building owners who desired an integrated system that could track with the existing HVAC system.

Issues:

1. Reliability
2. Integration with Johnson Controls Building Automation System (BAS)
3. Cost effectiveness

TRIATEK Solutions:

1. TRIATEK LP-2800 Mini Lighting Controllers provide excellent reliability with easy maintenance access.
2. TRIATEK LP-2800 Controllers added seamless interoperability with Johnson Controls BAS for single source responsibility.
3. Efficient low-cost TRIATEK LP-2800 will allow customer to achieve payback within three years, while also adding functionality and greater operational control to facility management.
