Triatek receives Global Impact Award from the Metro Atlanta Chamber of Commerce

Triatek recognized for global business growth and contributing to the global fluency of Atlanta

ATLANTA, GEORGIA – On Wednesday, April 19, 2017 Triatek received the Global Impact Award in the Global Business Growth category from the Metro Atlanta Chamber of Commerce during the 8th Annual Global Impact Awards held at the Georgia Aquarium.

The Global Impact Awards honor metro Atlanta companies that go above and beyond to achieve excellence in international commerce, innovation, and entrepreneurship to build a sustainable global ecosystem in metro Atlanta. Nominated companies are vetted through several rounds of voting from the selection committee.

“Triatek is honored to receive the Global Impact Award. Atlanta is home to some of the most recognized brands in the world, and a leader in global exports. This award is a testament to the dedication of our employees and partners in providing critical room airflow controls to hospitals and laboratories around the world,” said Triatek CEO Jim Hall. “International growth is a strong focus for Triatek and our success is a direct result of the resources available through the Metro Atlanta Chamber of Commerce, the city of Atlanta, and the Georgia Economic Developers Association.”

Remarks were given by the President of the Metro Atlanta Chamber of Commerce, Hala Moddelmog, and the Mayor of Atlanta, Kasim Reed. The keynote address was given by Dennis P. Lockhart, the recently retired President of the Federal Reserve Bank of Atlanta.

Triatek has contributed to Metro Atlanta’s global fluency by opening up markets in Brazil, Canada, China, Egypt, Kenya, Kuwait, Mexico, Saudi Arabia, Singapore, South Korea, Spain, Sweden, and Qatar, among many others.

About Triatek

Triatek designs and manufactures innovative airflow solutions for critical environments like negative and positive pressure hospital isolation rooms, operating suites, clean rooms, and laboratories. Triatek’s products help to protect occupants from airborne contaminants. The product line includes Venturi air valves, room pressure controllers, fume hood controllers, central monitoring systems, sensors, actuators, and most recently low flow high performance fume hoods.
